## About myself

Backend Engineer with 7+ years building scalable Python/Django systems in fintech and insurance. Proven track record in performance optimization, security hardening, and system architecture, delivering measurable results across international teams. Comfortable picking up new stacks and languages as needed ,previously onboarded to new systems and technologies within production timelines. Top university graduate.

## Skills

- Backend:** Python, Django, Django REST Framework, Celery, Redis
- Database:** PostgreSQL, MySQL, Query optimization, indexing
- Cloud & DevOps:** AWS (S3, IAM, Secrets Manager, pre-signed URLs), Docker, CI/CD, Git
- Architecture:** Event-Driven Design, Strategy Pattern, Factory Pattern, SSO/OAuth/keycloak
- Testing:** Pytest, unittest, Cypress (E2E)

## Work experience

**Senior Backend Eng** | tigerlab | 01/07/2025 - Current | Kuala Lumpur, Malaysia

- Diagnosed and resolved N+1 queries and legacy bottlenecks, cutting system load by **30%** and improving response times across multiple services
- Architected and delivered a scoped permission system from scratch, combining Django action permissions with geographic data scoping, improving data compliance by **50%**
- Led end-to-end **100%** implementation of a custom SSO integration for a client using Django REST Auth, covering API design, token flow, and testing
- Applied Strategy and Factory patterns across core backend modules, reducing coupling and improving maintainability across the codebase by **60%**
- Improved client data privacy by **90%** by resolving a critical security issue where private policy files were publicly accessible; migrated them to a private bucket, revoked public access, implemented pre-signed URLs, and updated legacy code in phases across UAT, hotfix, and production.
- Supervised **15%** of the company's engineers, conducting code reviews, managing merges, and deploying to UAT and hotfix environments.
- Collaborated with cross-functional teams to ensure seamless integration.

**Business or sector** Financial and insurance activities | **Department:** IT | **Website:** <https://www.tigerlab.com/>

**Software developer** | tigerlab | 15/06/2023 - 30/06/2025 | Kuala Lumpur, Malaysia

- Built and delivered full **100% of Claim Journey** feature enabling end-to-end insurance claim submission with form validation, state management, and API integration
- **Reduced external API calls by 20% by designing a middleware caching layer, lowering latency and third-party costs**
- Contribute **45%** of **business rules engine** tied to DBs, triggering logic (Referral) based on user selections in insurance forms.
- Identified and resolved N+1 query patterns across legacy services, reducing system load by **20%**
- Resolved over **60%** of identified bugs in legacy applications, significantly improving system stability, reliability, and maintainability.

**Business or sector** Financial and insurance activities | **Website:** <https://www.tigerlab.com/>

**Software developer** | KUWAITNET | 02/02/2020 - 17/05/2023 | Remote, Kuwait

- Led a full stack migration from Python 2 / Django 1.8 to Python 3.9 / Django 3.2, improving overall performance by **45%** and eliminating EOL security risks
- Delivered **100%** of integration for Kuwait PACI API, handling authentication, data mapping, and error handling end-to-end
- Integrated DB-Mailer into the Django admin panel, enabling transactional email workflows for internal operations
- Customized **25%** of third-party packages to ensure compatibility with the upgraded stack.
- Achieved **75%** unit test coverage across core modules and automated E2E testing for **3** apps using Cypress.

**Business or sector** Other service activities | **Website:** <https://kuwaitnet.com/en/>

**Software developer (Intern)** | SCASE | 17/11/2018 - 10/01/2020 | Latakia, Syria

- Developed and delivered **2** end-to-end AI projects in Python, covering data preprocessing, model training, and inference
- **Lane Detection:** Compared classical image processing techniques against deep learning approaches, evaluating accuracy and performance trade-offs
- **Object Tracking:** Fine-tuned and deployed an object detection model using Facebook Detectron2, handling full training pipeline and inference

## Education & Training

**B.S in Information Technology** | Tishreen University, Latakia University | 13/07/2016 - 01/02/2021 | Latakia , Syria

- Graduated with a GPA of **87.56%**, ranking among the **top students** in the faculty
- Ranked **12th out of 3,500 students** nationally in Syria's Unified National Exam: top **2%**
- Recipient of the **AI-Basel Award** for academic excellence: awarded **4 consecutive times**
- Co-founded a student volunteer group focused on peer mentoring and academic support

**Field(s) of study:** Software and applications development and analysis | **Final grade:** 87.56 % | **Level in EQF:** 6

## Language Skills

- Arabic: Mother tongue
- English: Professional C2
- Deutsche A2 (in progress)
